CCT DAO Constitution (Genesis Edition)

Version: 1.1 (Revised)
Date: January 9th , 2026
Status: Living Document / Draft for Ratification

Preamble

We, the community of the CrowdContributionToken (CCT) Network, establish this Constitution to govern our decentralized industrial asset network.

- **Scope:** Our vision is a universal industrial network, with an initial focus on 3D printing and industrial manufacturing design.

- **Core Principle: Contribution = Equity**.

Article I: Ecosystem Roles & Membership

1.1 DAO Structure

The ecosystem comprises distinct roles, balancing open market consumption with decentralized governance.

1.2 Membership Tiers

- **Consumers (End Users):**
  Individuals or businesses who purchase designs or services. They pay in Fiat or Token but do not necessarily participate in governance.

- **Level 1: Citizens (Community):**
  General public members who join the Discord/Community.

- **Level 2: Token Holders (Voters):**
  Individuals holding CCT tokens. They possess basic voting rights on proposals.

- **Level 3: Contributors (The Workforce):**
  Verified individuals adding value, including:

  - **Designers:** Creators of 3D assets.

- o **Auditors/Validators:** Technical experts who verify printability and safety of designs (Quality Assurance).

  - o **Developers:** Code contributors.

- **Level 4: Guardians (The Council):**
  Core administrators are responsible for strategic execution and security.

Article II: The Guardian Council (Level 4)

2.1 Composition

- The Council consists of **five (5) seats**.

- **Genesis Phase:** Seats are appointed by the Founding Team to ensure stability.

- **Founding Team:** The initial promoters acting as temporary administrators until Phase 3 Decentralization.

- **Election Phase:** Upon Mainnet Launch (Phase 3), seats are elected by Level 2+ members via token voting.

2.2 Powers & Duties

- Manage the Multi-Sig Treasury Wallet.

- Vet and merge code/IP.

- Emergency response.

2.3 Term

- Guardians serve a term of **six (6) months** and may be re-elected.

2.4 Impeachment (Removal)

A Guardian may be removed before their term expires if:

- **Proposal:** A "Vote of No Confidence" is proposed by at least 10% of the circulating token supply or 3 other Guardians.

- **Vote:** The proposal receives a **>66% supermajority** vote from the community.

- **Automatic Removal:** Upon passing, the Guardian's admin privileges and multi-sig key must be revoked within 24 hours.

Article III: Governance & Voting

3.1 Voting Token

- Governance power is derived from CCT Tokens.

- **1 Token = 1 Vote** (subject to Quadratic Voting adjustments if implemented later).

3.2 Proposal Thresholds

Different actions require different levels of consensus:

Proposal Type	Description	Quorum Required	Approval Threshold
CIP (Standard)	Community Improvement Proposals (e.g., marketing spend, bounty adjustments)	10%	>50% (Simple Majority)
CCP (Core)	Core Constitutional Proposals (e.g., protocol upgrades, minting logic, changing this Constitution)	20%	>66% (Supermajority)

3.3 Veto Power (Genesis Clause)

- The Founding Team retains veto power over fatal security/legal risks until Phase 3 (Mainnet Launch).

Article IV: Financial Management (Treasury)

4.1 Treasury & Revenue

- The Treasury collects platform fees.

- **Exchange Logic:** The DAO may accept Fiat payments from consumers. The protocol is authorized to use these funds to buy back CCT from the market or mint CCT to reward contributors, ensuring a direct link between platform usage and token value.

4.2 Spending Authority

- **Tier 1 (Core Team):** Expenses under **$5,000 USD** equivalent may be approved by the Guardian Council (3/5 signatures).

- **Tier 2 (Community):** Expenses over **$5,000 USD** require a formal CIP proposal and community vote.

4.3 Dissolution & Priority Liquidation (Genesis Clause)

- In the event of a dissolution, winding up, or Liquidation Event of the Project prior to the completion of Phase 3 (Mainnet Launch), the distribution of remaining Treasury assets shall adhere to the following priority schedule:

  - **Tier 1** (Priority): Holders of Tokens (or Warrants) earned through verified Technical Contribution (designated as "Genesis Nodes") shall have first priority in the distribution of net assets.

  - **Tier 2** (Subordinated): Tokens or rights held by the Founding Team, Promoters, or non-technical advisors shall be subordinate to Tier 1.

  - **Rationale:** This priority structure ensures that the contributors responsible for building the core code infrastructure are compensated first, consistent with the Core Principle of "**Contribution = Equity**".

Article V: Definitions & Roadmap Phases

5.1 Phase Definitions

- **Phase 1 (Genesis):** Off-chain governance. Tokens are tracked internally (Notion/Database). Focus on community building.

- **Phase 2 (Testnet/MVP):** Technical MVP live. Points system migrating to testnet.

- **Phase 3 (Mainnet Launch):** The official "Decentralization Event."

  - **Definition:** The CCT Token is deployed on a public blockchain (e.g., Polygon/Ethereum); smart contracts take custody of the Treasury; tokens become freely transferable and liquid.

Article VI: Amendments

- This Constitution may be amended only by a **>66% supermajority** vote.
